## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-61 and 63-75, drawn to an apparatus, including: a storage element including the features of "an input disposed for receiving digital content from a DVD, the storage element being capable of non-evanescently storing that digital content using a storage technique substantially different from the DVD, the digital content from the DVD complying with a CSS license to discourage unauthorized copying of the digital content; a playback device coupled to the storage element, the playback device having an input disposed for receiving the digital content and having an output disposed for coupling a media stream represented by that digital content for presentation, the digital content complying with the CSS license at the input of the playback device to discourage unauthorized copying of the digital content; and a media reader, the media reader having a read element capable of being coupled to the DVD", classified in class 386, subclass 94.
- II. Claims 76-77 and 79-102, drawn to a method of doing business including the steps of sending data from a device that reads a DVD to a remote playback device while complying with CSS license agreement terms and CSS procedural specification terms to discourage unauthorized copying of the data, classified in class 705, subclass 57.

The inventions are distinct, each from the other because of the following reasons:

Inventions in Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process that teaches the feature of "sending data from a device that reads a DVD to a remote playback device while complying with CSS license agreement terms and CSS procedural specification terms to discourage unauthorized copying of the data" as recited in Group II can be practiced by another and materially different apparatus than the apparatus that teaches the feature of "an input disposed for receiving digital content from a DVD, the storage element being capable of non-evanescently storing that digital content using a storage technique substantially different from the DVD, the digital content from the DVD complying with a CSS license to discourage unauthorized copying of the digital content; a playback device coupled to the storage element, the playback device having an input disposed for receiving the digital content and having an output disposed for coupling a media stream represented by that digital content for presentation, the digital content complying with the CSS license at the input of the playback device to discourage unauthorized copying of the digital content; and a media reader, the media reader having a read element capable of being coupled to the DVD" as recited in Group I. And also, the apparatus with features as recited in Group I can be used to practice another and materially different process with the features recited in Group II.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
